## ABBREVIATIONS

Name	Description
<b>Ethereum</b>	An open source platform based on blockchain technology to create and distribute smart contracts and decentralized applications.
<b>Ether (ETH)</b>	A cryptocurrency whose blockchain is generated by the Ethereum platform. Ether is used for payment of transactions and computing services in the Ethereum network.
<b>Smart contract</b>	A computer protocol intended to digitally facilitate, verify or enforce the negotiation or performance of a contract.
<b>Solidity</b>	A contract-oriented, high-level language for implementing smart contracts for the Ethereum platform.
<b>Solc</b>	A compiler for Solidity.
<b>ERC20</b>	ERC20 (BEP20 in Binance Smart Chain or xRP20 in other chains) tokens are blockchain-based assets that have value and can be sent and received. The primary difference with the primary coin is that instead of running on their own blockchain, ERC20 tokens are issued on a network that supports smart contracts such as Ethereum or Binance Smart Chain.

## EXECUTIVE SUMMARY

This Security Audit Report was prepared by Verichains Lab on Feb 23, 2024. We would like to thank the Hydrogen for trusting Verichains Lab in auditing smart contracts. Delivering high-quality audits is always our top priority.

This audit focused on identifying security flaws in code and the design of the Staking Smart Contract. The scope of the audit is limited to the source code files provided to Verichains. Verichains Lab completed the assessment using manual, static, and dynamic analysis techniques.

**During the audit process, the audit team had identified no vulnerable issues in the smart contracts code.**

### CONFIDENTIALITY NOTICE

*This report may contain privileged and confidential information, or information of a proprietary nature, and information on vulnerabilities, potential impacts, attack vectors of vulnerabilities which were discovered in the process of the audit.*

*The information in this report is intended only for the person to whom it is addressed and/or otherwise authorized personnel of Hydrogen. If you are not the intended recipient, you are hereby notified that you have received this document in error, and that any review, dissemination, printing, or copying of this message is strictly prohibited. If you have received this communication in error, please delete it immediately.*

<b>1.4. Disclaimer .....</b>	<b>6</b>
<b>1.5. Acceptance Minute.....</b>	<b>6</b>
<b>2. AUDIT RESULT .....</b>	<b>7</b>
<b>2.1. Overview .....</b>	<b>7</b>
<b>2.2. Findings.....</b>	<b>7</b>
<b>3. VERSION HISTORY .....</b>	<b>8</b>

## 1. MANAGEMENT SUMMARY

### 1.1. About Staking Smart Contract

The Staking Smart Contract is deployed on Blast Blockchain (an EVM-forked). It is a gem in Blast ecosystem.

### 1.2. Audit scope

This audit focused on identifying security flaws in code and the design of the Staking Smart Contract.

The latest version of the following files were made available in the course of the review:

SHA256 Sum	File
5551e9147d20ec133ca56f6a862c60cffd4600f7beb629951c5782a7ef0470bb	HsETH.sol
e3323e4283eb8c47f42460de0c668f2d60e5d1c3e3602f8705603fb231cf4350	Staking.sol
15faa278a67ade05e1fe70dedc73ac4c6edb9b79ca1bba4e9f3626db4e8fcc8a	Vault.sol
a94661c03b4497208bd62f9a0f30932d57b1015e8120844a5c2243bc35edf177	VaultFactory.sol

### 1.3. Audit methodology

Our security audit process for smart contract includes two steps:

- Smart contract codes are scanned/tested for commonly known and more specific vulnerabilities using public and RK87, our in-house smart contract security analysis tool.
- Manual audit of the codes for security issues. The contracts are manually analyzed to look for any potential problems.

Following is the list of commonly known vulnerabilities that were considered during the audit of the smart contract:

- Integer Overflow and Underflow
- Timestamp Dependence
- Race Conditions
- Transaction-Ordering Dependence
- DoS with (Unexpected) revert
- DoS with Block Gas Limit
- Gas Usage, Gas Limit and Loops
- Redundant fallback function

## Report for Hydrogen

### Security Audit – Staking Smart Contract

Version: 1.0 – Private Report

Date: Feb 23, 2024

- Unsafe type Inference
- Reentrancy
- Explicit visibility of functions state variables (external, internal, private and public)
- Logic Flaws

For vulnerabilities, we categorize the findings into categories as listed in table below, depending on their severity level:

SEVERITY LEVEL	DESCRIPTION
<b>CRITICAL</b>	A vulnerability that can disrupt the contract functioning; creates a critical risk to the contract; required to be fixed immediately.
<b>HIGH</b>	A vulnerability that could affect the desired outcome of executing the contract with high impact; needs to be fixed with high priority.
<b>MEDIUM</b>	A vulnerability that could affect the desired outcome of executing the contract with medium impact in a specific scenario; needs to be fixed.
<b>LOW</b>	An issue that does not have a significant impact, can be considered as less important.

*Table 1. Severity levels*

#### 1.4. Disclaimer

Hydrogen acknowledges that the security services provided by Verichains, are conducted to the best of their professional abilities but cannot guarantee 100% coverage of all security vulnerabilities. Hydrogen understands and accepts that despite rigorous auditing, certain vulnerabilities may remain undetected. Therefore, Hydrogen agrees that Verichains shall not be held responsible or liable, and shall not be charged for any hacking incidents that occur due to security vulnerabilities not identified during the audit process.

#### 1.5. Acceptance Minute

This final report served by Verichains to the Hydrogen will be considered an Acceptance Minute. Within 7 days, if no any further responses or reports is received from the Hydrogen, the final report will be considered fully accepted by the Hydrogen without the signature.

## 2. AUDIT RESULT

### 2.1. Overview

**VaultFactory.sol:** Create own user's vaults.

**Vault.sol:** Add ETH as collateral and borrow **hsETH** with 1:1 ratio.

**Staking.sol:** Stake/unstake/earn **hsETH** reward.

**HsETH.sol:** ERC20 token with some properties:

PROPERTY	VALUE
Name	hsETH
Symbol	hsETH
Decimals	18
Total Supply	unidentified

*Table 2. The Token Smart Contract properties*

### 2.2. Findings

During the audit process, the audit team found no vulnerability in the given version of Staking Smart Contract.
